

1.1 Changes in the customer.ini file starting with UC3-Appl. 1.12.0

- ☐ in the past many parameters were defined in the customer.ini file, although it would make sense to define these things direct in the NonSalesMode because it must be possible for the customer to change these things easily

1.1.1 Parameters moved from the customer.ini to the NSM

- ☐ starting with UC3 application version 1.12.0 many items of the old customer.ini file have been moved to NSM items
- ☐ the most visible changes are
 - from [Sale] and [Inventory] and [minmax] sections are removed properties regarding management of receipt number because those properties are now included in 'Network configuration' managed through NSM modules and XML interface
 - from [Inventory] section the property indicating the MaxModeNo is moved to section [minmax] with name "nMaxInventoryModeNo", and properties regarding inventory modes names are removed because names for inventory modes will be defined in the file language.csv with the default texts and/or customer_language.csv with customized texts
 - in section [layout] remains only property regarding "sTemplateModeSelect" and all other properties are removed because they are now managed with NSM item 815 - Configuration profile\Touch
 - sections [advertisement] and [info] are completely removed because corresponding properties are now managed with NSM items for Configuration profiles 815 for Touch (customer side) and 81+11 for Advertisement Display ¼ VGA
 - section [PriceChangeReport] is removed because that configuration data is now part of NSM item 8442 – Scale network functions\Report definition\Price change report

1.1.2 Customize the customer.ini file with profile names

- ☐ not at all there are many parameters in the customer.ini file which can be changed to customize the UC3 application
- ☐ in the past to do this was only possible by having different customer.ini files on the UC3e devices – but all of them with the same file name
- ☐ starting with UC3 application version 1.12.0 it's now possible to define in the customer.ini file profile names with changed settings for the different usage of the UC3 devices within the UC3 branch
- ☐ the big advantage is now, that we have only one customer.ini file for all devices of the UC3 branch with identical profiled parameters
- ☐ in the NSM item 831 - Device profiles\Profile assignment we can select one of the profiled parameter settings of the customer.ini for each UC3 device (if nothing is defined the default parameters without profile name are used)

- ❑ to define profiled parameter setting in the customer.ini file is possible for each parameter section by adding a profile name as prefix to the section name **[profile-name.intial-section-name]**.

the customer.ini sections that can be used for profiles parameter settings are:

- ➔ [sales]
- ➔ [selfservice]
- ➔ [prepack1]
- ➔ [inventory]
- ➔ [cashregister]
- ➔ [printer]
- ➔ [applications]
- ➔ [system]
- ➔ [daily reboot]
- ➔ [nsm]
- ➔ [customermode].

- ❑ here is an example for a profiled customer.ini

```

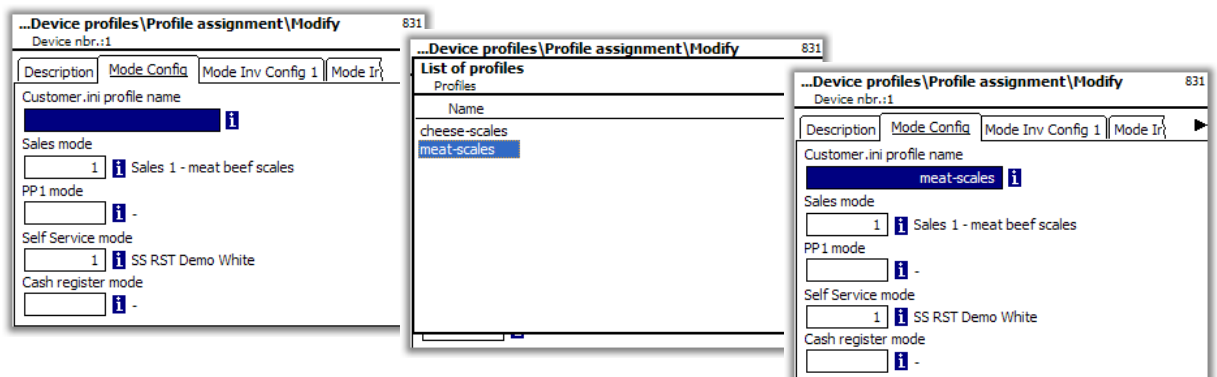

; this is the customer file (generated by the Serviceability migration procedure)
;-----
; 2009-07-02    added profiled items for meat-scales and cheese scales
;               added in [minmax] nMaxInventoryModeNo = 2 (texts to define in customer_language.csv)
;-----

[meat-scales.applications]
bEnableModeChange = 1
bEnableReceiptPreviewRefresh = 1
bModeChangeEntryInventory1 = 1
bOperatorTluMultiLine = 1
bOperatorTluSoftLineBreak = 1
bOperatorTluTextHeightAdaption = 1

[cheese-scales.applications]
bEnableModeChange = 0
bModeChangeEntryInventory2 = 1
bOperatorTluMultiLine = 1
bOperatorTluSoftLineBreak = 1
bOperatorTluTextHeightAdaption = 1

```

- ❑ with this customer.ini file it's possible to select in NSM item 831 – Device profiles\Profile assignment one of the two profile names which are “meat-scales” and “cheese-scales” for the section “applications”

- ❑ all parameters which are not defined in the profiled sections of **[profile-name.applications]** are taken from the section **[applications]**
- ❑ if a defined profile name is not available in the customer.ini all parameters are taken from the sections without a profile name
